

## EXCEPTIONAL CONNECTIVITY FOR BROADCAST AND TELECOMS SERVICES

**Ku-band Superbeam Europe Downlink Coverage**

**Ku-band Steerable North West Africa Downlink Coverage**

### KEY MARKETS

- Western/Eastern Europe
- Africa
- Middle East
- Central Asia

### KEY SERVICES

- TV and radio broadcasting
- Broadband applications
- Professional video
- Data networks
- Internet applications

### SATELLITE

#### Satellite Manufacturer

Alcatel Space

#### Launch Date

05/07/2002

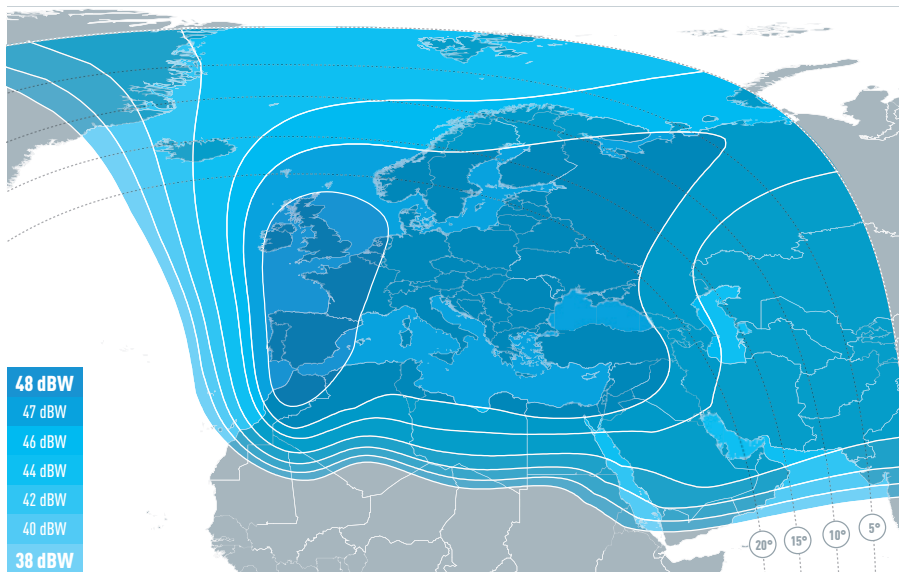

#### Orbital Position

5 degrees West

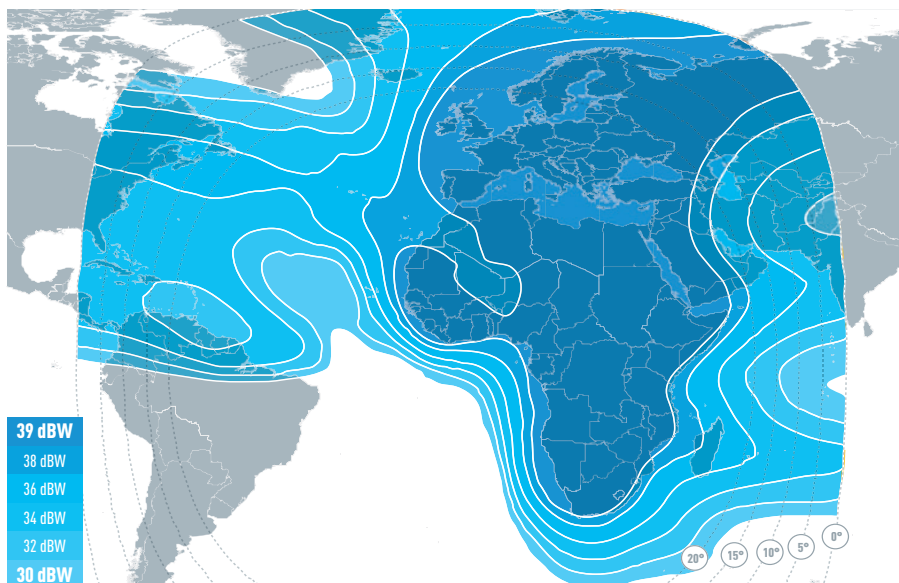

#### Frequencies

C-band, Ku-band

## Ku-band Widebeam Downlink Coverage

## C-band Global Downlink Coverage

## Exceptional connectivity for broadcast and telecoms services

With its mix of Ku and C-band frequencies, EUTELSAT 5 West A is a high-powered spacecraft, providing an exceptional range of connectivity combinations.

EUTELSAT 5 West A offers two-way broadband internet access, broadcast services and corporate networks to large audiences. The satellite also plays a key role in the network infrastructure being deployed across Europe and the Mediterranean Basin for the digital switchover, distributing digital terrestrial television (DTT) signals to head-end transmitters.

The satellite features a Euro Mediterranean superbear coverage, a unique pan-Atlantic widebeam coverage encompassing the Americas, Africa and Europe, and a steerable antenna that can be pointed over any one of these regions, including the Middle East.

EUTELSAT 5 West A also offers C-band capacity, an important asset for serving the pan-African market and the Caribbean.
