LAUNCH INFORMATION

LAUNCH SITE

Launch Complex 1, Pad B
Mahia, New Zealand

LAUNCH WINDOW

A 14-day launch window opens
no earlier than 14 September UTC.

DAILY LAUNCH OPPORTUNITY

A launch is possible within this time band for
each day of the launch window.

Time Zone	Window Open
UTC	20:30 – 20:45
NZST	08:30 – 08:45 (Day after)
EDT	16:30 – 16:45
PDT	13:30 – 13:45

MISSION OVERVIEW

ABOUT 'THE OWL SPREADS ITS WINGS'

LAUNCH COMPLEX 1
MAHIA, NEW ZEALAND

“The Owl Spreads Its Wings” is a landmark mission for Rocket Lab — the third for repeat customer Synspecive, on the 30th Electron flight, carrying the 300th Rutherford engine and 150th satellite flown to space.

“The Owl Spreads Its Wings” is the second mission in a three-launch contract from Synspecive, following on from “The Owl’s Night Continues” earlier this year, which likewise made another first as the inaugural launch from the new Pad B at Launch Complex 1.

The two previous missions for Synspecive — “The Owl’s Night Begins” in December 2020 and “The Owl’s Night Continues” in February 2022 — carried their StriX-series satellites. These Synthetic Aperture Radar (SAR) satellites can gather high resolution Earth observation data regardless of conditions or daylight, offering a resilient and effective resource for the purposes of urban development, infrastructure monitoring, and disaster response.

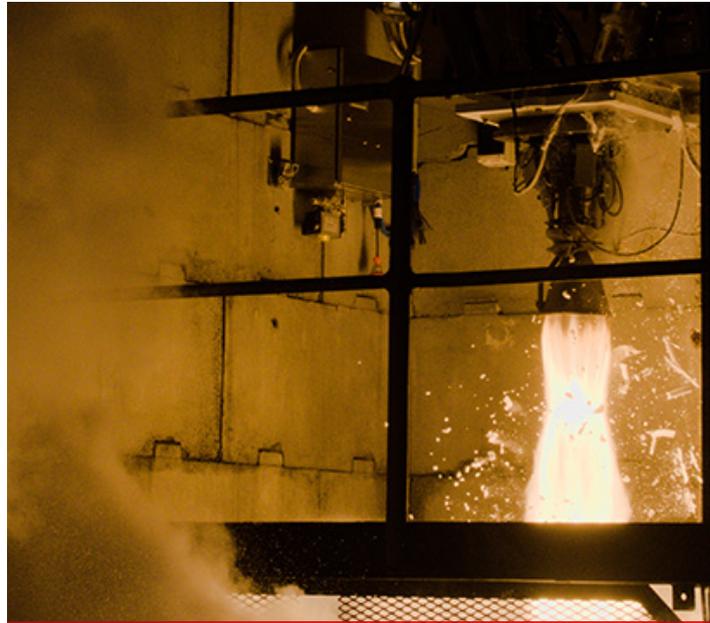

As with all the StriX satellites Rocket Lab has launched for Synspecive, Electron’s payload fairing was custom designed with small domes to allow for the size of the satellite.

Rocket Lab will not attempt to recover Electron for this mission.

ON THE UP & UP

MISSION MILESTONES WITH ELECTRON

F27 'CAPSTONE' MOON MISSION, 2022
ELECTRON LIFTS OFF FROM LAUNCH COMPLEX 1

THE RUTHERFORD ENGINE
TEST CELL FIRE

It's been just over five years since Rocket Lab launched Electron to orbit for the first time – and we've gone on to celebrate many firsts since then.

30TH LAUNCH

"The Owl Spreads Its Wings" marks the 30th Electron launch, further reinforcing a track record of reliability and responsiveness. Over 30 launches, Electron as a launch vehicle has become one of the most reliable launch vehicles available globally, as well as evolving to carry twice the payload mass and perform beyond original parameters – which proved particularly important in the recent CAPSTONE mission to the Moon. With 30 launches under its belt from Launch Complex 1 in Mahia, New Zealand, and the first slated for Launch Complex 2 in Virginia later this year, Electron has established its role as a workhorse for small launch and making space accessible for all.

150TH SATELLITE

Over those 30 launches, Rocket Lab has successfully delivered dozens of satellites to orbit and, more recently, to the wider solar system. The satellites we've launched to date include Earth observation and weather

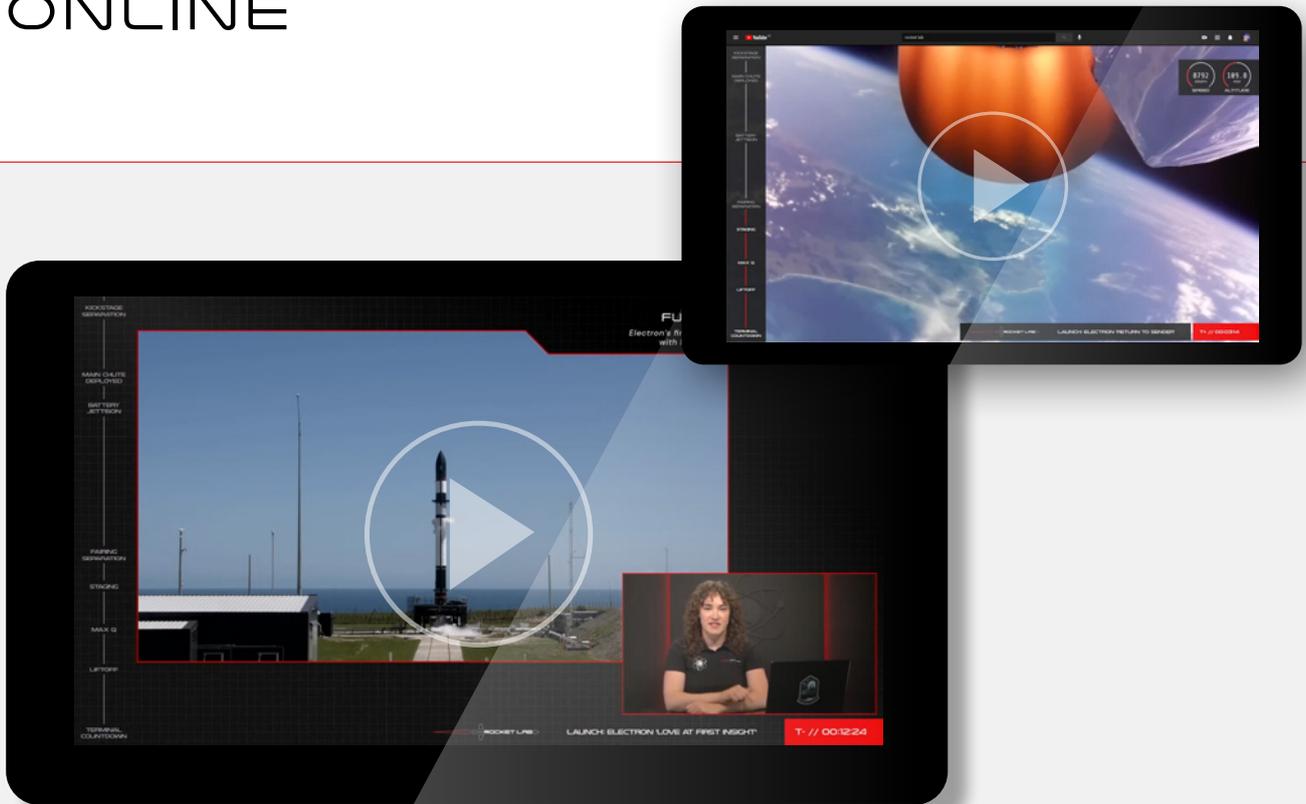

monitoring, support for the Covid-19 response and disaster relief, connectivity and better management of air traffic and public safety, science and research, national security, and more. With a vision to make launch as straightforward as Earth-based logistics, the delivery of the 150th satellite by Electron is a key metric in establishing this consistency of service.

300TH RUTHERFORD ENGINE

Each Electron vehicle carries 11 engines across three stages – 9 sea-level Rutherford Engines on the first stage, 1 space-optimised Rutherford Engine on the second stage, and the smaller Curie engine on the Kick Stage that circularises the orbit needed to deliver its payload to a very precise location in space.

With the celebration of Electron's 30th launch, we also celebrate the 300th Rutherford Engine that will fly past the Karman line into space – yet another measure of the reliability and success of the Electron launch program. With the first recovered Rutherford Engine successfully passing its first hot-fire test in recent days, and Rocket Lab's Neutron program well into development, Electron has set the standard for resilient, agile launch capability.

VIEWING A LAUNCH ONLINE

LIVE STREAM LINKS

The livestream is viewable at:

rocketlabusa.com/live-stream

Webcast will be live approx. T-20 minutes

LAUNCH FOOTAGE & IMAGES

Images and footage of "The Owl Spreads Its Wings" launch will be available shortly after a successful mission at:

VIEWING A LAUNCH IN PERSON

Location

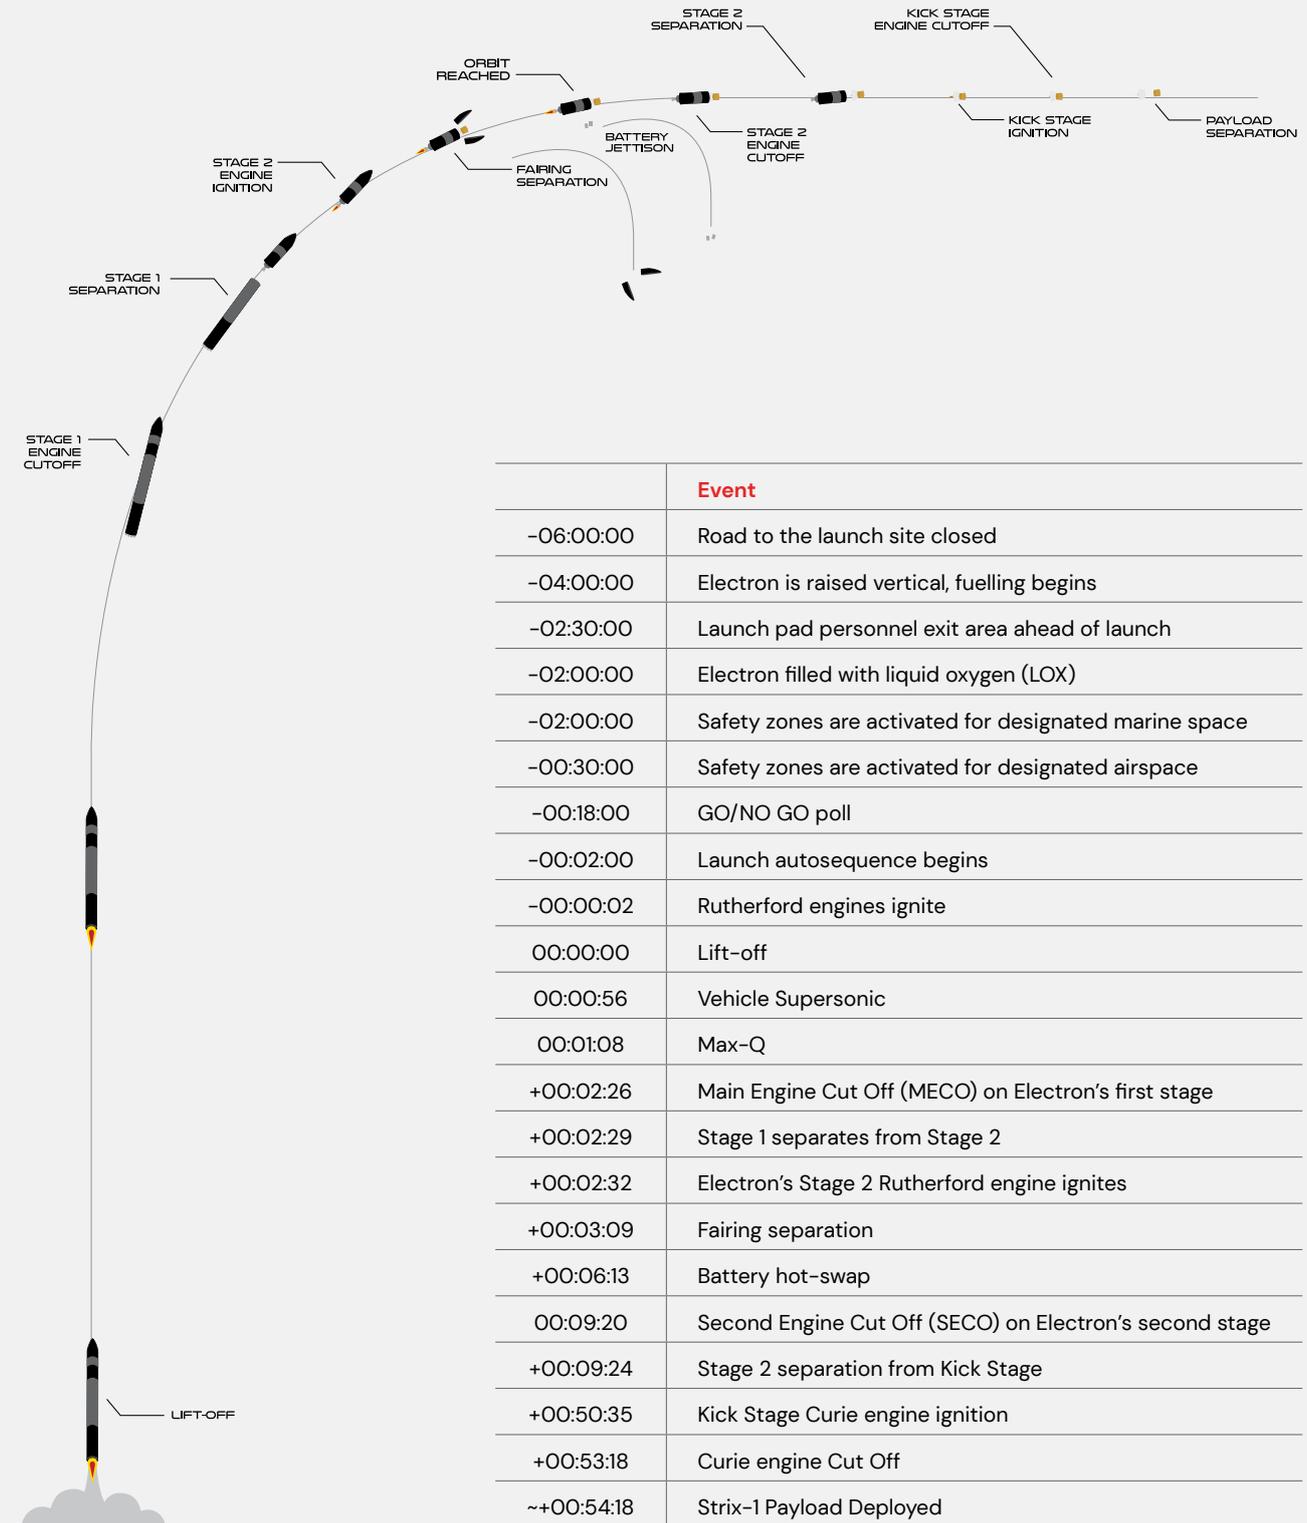

Wairoa District Council has allocated a rocket launch viewing area for the public near Nuhaka, accessible via Blucks Pit Road. Scrubs and postponements are likely during launch windows, so visitors to the Blucks Pit viewing site should anticipate multiple postponements, sometimes across several days.
