

ARIANE 5 to boost satellites for Europe and Japan

Arianespace's fifth launch of the year will orbit two telecom satellites: Artemis for the European Space Agency, and BSAT-2b for B-SAT of Japan, as part of a turnkey contract with Orbital Sciences Corp. of the United States. This latest launch confirms Arianespace's position as the benchmark launch services provider for operators in Europe, the United States and Japan.

ARTEMIS, the most advanced telecommunications satellite ever built by ESA, will help develop the application of satellite navigation systems to land, air and maritime transport.

Built by prime contractor Alenia Spazio of Italy, ARTEMIS has a three-pronged mission: provide communications between mobile terminals, transmit GPS-type signals as part of Europe's Egnos satnav enhancement system, and establish high-speed inter-satellite communications links.

BSAT-2b is the fourth satellite in this series to be launched by Arianespace, following BSAT-1a on Flight 95, BSAT-1b on Flight 108, and BSAT-2a on Flight 140. Today, over 16 million households receive TV programs via these three satellites operated by Broadcasting Satellite System Corporation (B-SAT).

BSAT-2b is also the 16th satellite to be launched by Ariane for Japan. Out of the 24 commercial launch contracts issued to date in Japan, Arianespace has won 18. It also launched the LDREX experimental satellite for NASDA on Flight 138.

Two other Japanese satellites are slated for an Arianespace launch: JCSAT-8 for JSAT Corp., and N-STAR c for mobile telecoms giant NTT DoCoMo.

Artemis and BSAT-2b will be launched by an Ariane 5.

APPENDIX

1. Flight 142 Key personnel.
2. Launch environment conditions.
3. Synchronized sequence.
4. ARIANESPACE orderbook.
5. ARIANESPACE, its relations with ESA and CNES.

1. Arianespace flight 142 mission

The 142th Ariane launch (Flight 142/Ariane 510) will use an Ariane 5 to place 2 telecommunications satellites into geostationary transfer orbit: ARTEMIS for the European Space Agency (ESA) and BSAT-2b for US manufacturer ORBITAL SCIENCES CORP. for Japanese operator B-SAT.

The launch will be carried out from the ELA 3 launch complex in Kourou, French Guiana. For Arianespace, this marks the seventh commercial mission of the new Ariane 5 launcher. Arianespace has performed 4 other launches this year (3 ARIANE 4 and 1 ARIANE 5).

The Ariane 510 launcher will carry a dual payload of 5,316 kg (11,695 lb), including 4,403 kg (9,686 lb) for the satellites.

INJECTION ORBIT

Perigee altitude	858 km
Apogee altitude	35 853 km at injection
Inclination	2° degrees

The lift-off is scheduled on the night of July 12 to 13, 2001 as soon as possible within the following launch window :

LAUNCH OPPORTUNITY

	Universal time (GMT)	Paris time	Tokyo time	Washington time	Kourou time
Between	09:58 pm	11:58 pm	06:58 am	05:58 pm	06:58 pm
and	11:31 pm	01:31 am	08:31 am	07:31 pm	08:31 pm
on	July 12, 2001	July 12/13, 2001	July 13, 2001	July 12, 2001	July 12, 2001

Ariane 510 payload configuration

The ARTEMIS satellite was built by ALENIA SPAZIO in Rome, Italy, for ESA.

Orbital position: 21.5° East, over Central Africa.

The BSAT-2b satellite was built by Orbital Sciences Corporation in Dulles, Virginia (USA), for Orbital Sciences Corp for Japanese operator, B-SAT.

Orbital position: 110° East, above the Island of Borneo.

2. Range operations campaign : ARIANE 5 – ARTEMIS/ BSAT-2b

The actual work for satellite range operations lasts 65 working days for ARTEMIS from its arrival in Kourou (before beginning combined operations).

The actual work for satellite range operations lasts 16 working days for BSAT-2b from its arrival in Kourou (before beginning combined operations).

The ARIANE 5 preparation campaign lasts 30 working days.

Satellites and launch vehicle campaign calendar

<i>Ariane activities</i>	<i>Dates</i>	<i>Satellites activities</i>
	March 26, 2001	Arrival in Kourou and beginning of ARTEMIS preparation campaign in S1B building.
Campaign start review	May 29, 2001	
EPC Erection	May 30, 2001	
EAP transfer and positionning	May 31, 2001	
Integration EPC/EAP	June 1, 2001	
EPS Erection	June 6, 2001	
Integration equipement bay	June 7, 2001	
Arianespace Flight 141	June 9, 2001	INTELSAT 901
	June 11, 2001	Transfer of ARTEMIS into the S3B building.
	June 13, 2001	Beginning of ARTEMIS filling operations in S3B building.
	June 13, 2001	Arrival in Kourou and beginning of BSAT-2b preparation campaign in S1A building.
	June 21, 2001	Transfer of BSAT-2b into the S3A building.
	June 25, 2001	Beginning of BSAT-2b filling operations in S3A building.
ROLL-OUT FROM BIL to BAF	June 26, 2001	

Satellites and launch vehicle campaign final calendar

J-9	Friday, June 29	ARTEMIS integration on Sylde.
J-8	Monday, July 2	BSAT-2b integration on launcher.
J-6	Wednesday, July 4	Mating of upper composite (Sylde + ARTEMIS + fairings) on launcher.
J-4	Friday, July 6	Filling of SCA with N ₂ H ₄ .
J-4	Friday, July 6	Filling of EPS stage with MMH.
J-3	Monday, July 9	LAUNCH REHEARSAL.
J-3	Monday, July 9	Filling of EPS stage with N ₂ H ₄ .
J-2	Tuesday, July 10	LAUNCH READINESS REVIEW (RAL) and final mechanical preparation of launcher. Launcher arming
J-1	Wednesday, July 11	ROLL-OUT FROM BAF to LAUNCH AREA and filling of the EPC Helium sphere.
J-0	Thursday, July 12	LAUNCH COUNTDOWN including EPC filling with liquid oxygen and liquid hydrogen.

3 - Launch countdown and flight events :

The countdown comprises all final preparation steps for the launcher, the satellites and the launch site. If it proceeds as planned, the countdown leads to the ignition of the main stage engine, then the two solid boosters, for a liftoff at the targeted time, as early as possible in the satellites launch window.

The countdown culminates in a synchronized sequence (see appendix 3), which is managed by the control station and onboard computers starting at T-6 minutes 30 s.

If an interruption in the countdown means that T-0 falls outside the launch window, then the launch will be delayed by one, two or more days, depending on the problem involved, and the solution developed.

<i>Time</i>	<i>Events</i>
- 9 h 00 mn	Start of final countdown.
- 7 h 30 mn	Check of electrical systems.
- 5 h 20 mn	Start of filling of main cryogenic stage with liquid oxygen and helium.
- 3 h 20 mn	Chilldown of Vulcain main stage engine.
- 1 h 15 mn	Check of connections between launcher and telemetry, tracking and command systems.
- 6 mn 30 s	"All systems go" report, allowing START OF SYNCHRONIZED SEQUENCE.
- 35 s	Start of automated ignition sequence.
- 22 s	Authorization for control handover to onboard computer.
- 03 s	Onboard systems take over.
- 02 s	Unlocking of inertial guidance systems to flight mode.

<i>HO</i>	<i>Ignition of the cryogenic main stage engine (EPC)</i>
+7,0 s	Ignition of solid boosters.
+7,3 s	Liftoff.
+ 13 s	End of vertical climb and beginning of pitch rotation (10 seconds duration).
+ 17 s	Beginning of roll maneuver.
+ 2 mn 24 s	Jettisoning of solid boosters.
+ 3 mn 25 s	Jettisoning of fairing.
+ 8 mn 00 s	Acquisition by Natal tracking station.
+ 9 mn 59 s	Extinction of main cryogenic stage.
+ 10 mn 06 s	Separation of main cryogenic stage.
+ 10 mn 28 s	Ignition of storable propellant stage.
+ 12 mn 08 s	Acquisition by Ascension tracking station.
+ 23 mn 01 s	Acquisition by Malindi tracking station.
+ 26 mn 48 s	Extinction of storable propellant stage.
+ 28 mn 06 s	Separation of ARTEMIS satellite.
+ 29 mn 58 s	Separation of SYLDA 5.
+ 35 mn 35 s	Separation of BSAT-2b satellite.
+ 37 mn 58 s	End of ARIANESPACE Flight 142 mission.

4 - Flight 142 trajectory:

The launcher's attitude and trajectory are totally controlled by the two onboard computers, located in the Ariane 5 vehicle equipment bay (VEB).

7.05 seconds after ignition of the main stage cryogenic engine at T-0, the two solid-propellant boosters are ignited, enabling liftoff. The launcher first climbs vertically for 6 seconds, then rotates towards the East. It maintains an attitude that ensures the axis of the launcher remains parallel to its velocity vector, in order to minimize aerodynamic loads throughout the entire atmospheric phase, until the solid boosters are jettisoned.

Once this first part of the flight is completed, the onboard computer optimizes the trajectory in real time, minimizing propellant consumption to bring the launcher first to the intermediate orbit targeted at the end of the main stage propulsion phase, and then the final orbit at the end of the flight of the upper (storable propellant) stage.

The main stage falls back off the coast of the Galapagos Islands in the Pacific Ocean. On orbital injection, the launcher will have attained a velocity of approximately 9,065 meters/second, and will be at an altitude of about 1,732 kilometers.

The fairing protecting the ARTEMIS/BSAT-2b spacecrafts is jettisoned shortly after the boosters are jettisoned at about T+195 seconds.

STANDARD ARIANE 5 TRAJECTORY FOR GEOSTATIONARY TRANSFER ORBIT

5 - Ariane 5 launcher

6 - The ARTEMIS Satellite:

Customer	European Space Agency (ESA)	
Prime contractor	Alenia Spazio – Rome (Italy)	
Mission	Experimental telecommunications	
Mass	Total mass at lift-off	3,105 kg (6,831 lb)
Stabilization	3 axis stabilized	
Dimensions		4.86 x 2.85 x 2.95 m
	Span in orbit	24.73 m
Payload	1 mobile telecom payload in L band 2 intersatellite links payloads in S and Ka bands and by laser	
Frequency bands	1.5/1.6 GHz (L band) from/to mobile 12/14 GHz (Ku band) from/to fixed stations	
On-board power	4.00 kW (at beginning of life)	
Life time	10 years	
Orbital position	21.5° East, above Central Africa	
Coverage area	Europe, North Africa and Middle-East

7 - The BSAT-2b satellite:

Customer	ORBITAL SCIENCES CORP. (USA) for B-SAT Corp. (Japan)	
Prime contractor	Orbital Sciences Corp., Dulles, Virginia	
Mission	Telecommunications Direct Broadcasting.	
Mass	Total mass at lift-off	1,298 kg (2,855 lb)
	Dry mass	535 kg (1,177 lb)
Stabilization	3 axis	
Dimensions	Height	3.7 x 2.2 x 2.1 m
	Span in orbit	15.7 m
Model	STAR 1	
Payload	4 Ku band transponders	
	Uplink	17.3-17.6 GHz
	Downlink	11.7-12.0 GHz
On-board power	2,6 kW (at beginning of life).	
Life time	10 years	
Orbital position	110°Est, above the Island of Borneo	
Coverage area	Japan

Annex 1 - Arianespace flight 142 key personnel

In charge of the launch campaign

Mission Director	(CM)	Didier CASSE	ARIANESPACE
------------------	------	--------------	-------------

In charge of the launch service contracts

ARTEMIS program director and ARIANE Payload Manager	(RCUA)	Jean-François LAUMONIER	ARIANESPACE
BSAT-2b program director and ARIANE Deputy Mission Manager	(RCUA/A)	Michael CALLARI	ARIANESPACE

In charge of ARTEMIS satellite

Satellite Mission Director	(DMS)	Gotthard OPPENHAUSER	ESA
Satellite Project Director	(CPS)	Fabio PALAMIDESSI	ALENIA SPAZIO
Satellite Preparation Manager	(RPS)	Marco COTOGNI	ALENIA SPAZIO

In charge of BSAT-2b satellite

Satellite Mission Director	(DMS)	David STEFFY	OSC
Satellite Project Director	(CPS)	Tim HEMKE	OSC
Satellite Project Director	(RPS)	Steven THIBAUT	OSC

In charge of the launch vehicle

Launch Site Operations Manager	(COEL)	André SICARD	ARIANESPACE
ARIANE Production Project Manager	(CPAP)	Bernard DONAT	ARIANESPACE

In charge of the Guiana Space Center (CSG)

Range Operations Manager	(DDO)	Jean-Yves TREBAOL	CNES/CSG
Flight Safety Officer	(RSV)	Dominique POULAIN	CNES/CSG

Annex 2 - Launch environment conditions

Acceptable wind speed limits at liftoff range from between 9 m/s. to 14 m/s. according to the wind direction. The most critical is a northerly wind. For safety reasons, the wind's speed on the ground (Kourou) and at a high altitude (between 10.000 and 2.000 m) is also into account.

Annex 3 - The synchronized sequence

The synchronized sequence starts 7 minutes before ignition (T-0). It is primarily designed to perform the final operations on the launcher prior to launch, along with the ultimate checks needed following switchover to flight configuration. As its name indicates, it is fully automatic, and is performed concurrently by the onboard computer and by a redundant computer at the ELA 3 launch complex until T-5 seconds. The computer commands the final electrical operations (startup of the flight program, servocontrols, switching from ground power supply to onboard batteries, etc.) and associated checks. It also places the propellant and fluid systems in flight configuration and performs associated checks. In addition, it handles the final ground system configurations, namely :

- startup of water injection in the flame trenches and jet guide (T-30 sec) ;
- hydrogen aspiration for chilldown of Vulcain engine in the jet guide (T-18 sec) ;
- burnoff of hydrogen used for chilldown (T-7 sec).

At T-3 seconds, the onboard computer takes over control of final engine startup and liftoff operations :

- It starts the ignition sequence for the Vulcain main stage engine (T-0) ;
- It checks engine operation (from T+4 to T+7 sec) ;
- It commands ignition of the solid boosters for immediate liftoff at T+7.5 seconds.

Any shutdown of the synchronized sequence up to T - 6 mn 30 seconds automatically places the launcher back in its T-6 min 30 sec configuration.

Annex 4 - Arianespace order book

To date 188 satellites and 38 auxiliary payloads have been launched by Arianespace.

Out of the 242 launch services contracted since 1981 by Arianespace and before Flight 142, 45 satellites and 9 ATV missions remain to be launched (3 confidential contracts at the request of customers).

Annex 5 - Arianespace, its relations with ESA et CNES

FROM A PRODUCTION BASE IN EUROPE, ARIANESPACE, A PRIVATE COMPANY, SERVES CUSTOMERS ALL OVER THE WORLD. Arianespace is the world's first commercial space transportation company, created in 1980 by 36 leading European aerospace and electronics corporations, 13 major banks and the French space agency CNES (Centre National d'Etudes Spatiales).

The shareholder partners in Arianespace represent the scientific, technical, financial and political capabilities of 12 countries : Belgium, Denmark, Germany, France, Great Britain, Ireland, Italy, Netherlands, Norway, Spain, Switzerland and Sweden.

In order to meet the market needs, Arianespace is present throughout the world : in Europe, with its head office located near Paris, France at Evry, in North America with its subsidiary in Washington D.C. and in the Pacific Region, with its representative offices in Tokyo, Japan, and in Singapore.

Arianespace employs a staff of 380. Share capital totals FF 2,088 million.

Arianespace is in charge of these main areas :

- markets launch services to customers throughout the world ;
- finances and supervises the construction of Ariane expendable launch vehicles ;
- conducts launches from Europe's Spaceport of Kourou in French Guiana ;
- insures customers for launch risks.

Personalized reliable service forms an integral part of Arianespace launch package. It includes the assignment of a permanent team of experts to each mission for the full launch campaign.

The world's commercial satellite operators have contracted to launch with Arianespace. This record is the result of our company's realistic cost-effective approach to getting satellites into orbit.

RELATIONS BETWEEN ESA, CNES AND ARIANESPACE

Development of the Ariane launcher was undertaken by the European Space Agency in 1973. ESA assumed overall direction of the ARIANE 1 development program, delegating the technical direction and financial management to CNES. The ARIANE 1 launcher was declared qualified and operational in January 1982. At the end of the development phase which included four launchers, ESA started the production of five further ARIANE 1 launchers. This program, known as the "promotion series", was carried out with a management arrangement similar to that for the ARIANE 1 development program.

In January 1980 ESA decided to entrust the commercialization, production and launching of operational launchers to a private-law industrial structure, in the form of ARIANESPACE company, placing at its disposal the facilities, equipment and tooling needed of producing and launching the ARIANE launchers.

Ariane follow-on development programs have been undertaken by ESA since 1980. They include a program for developing uprated versions of the launcher : Ariane 2 and Ariane 3 (qualified in August 1984) ; the program for building a second ARIANE launch site (ELA 2) (validated in August 1985) ; the Ariane 4 launcher development program (qualified on June 15th, 1988) ; and the preparatory and development program of the Ariane 5 launcher and its new launch facilities : ELA 3 (qualified on November, 1997). All these programs are run under the overall direction of ESA, which has appointed CNES as prime contractor.

In general, as soon as an uprated version of the launcher has been qualified 5 Oct, 1998, ESA makes the results of the development program together with the corresponding production and launch facilities available to ARIANESPACE.

ESA is responsible (as design authority) for development work on the Ariane launchers. The Agency owns all the assets produced under these development programs. It entrusts technical direction and financial management of the development work to CNES, which writes the program specifications and places the industrial contracts on its behalf. The Agency retains the role of monitoring the work and reporting to the participating States.

Since Flight 9 Arianespace has been responsible for building and launching the operational Ariane launchers (as production authority), and for industrial production management, for placing the launcher manufacturing contracts, initiating procurements, marketing and providing Ariane launch services, and directing launch operations.

USE OF THE GUIANA SPACE CENTER

The "Centre Spatial Guyanais" (CSG), CNES's launch base near Kourou, has all the equipment needed for launching spacecraft-radar tracking stations, telemetry receiving stations, a meteorology station, a telecommand station, safety facilities, etc...

It became operational in 1968 for the purpose of the French National Space Program.

ESA has built its own launch facilities, the ELA 1 and ELA 2 and ELA 3 (for Ariane 5) complexes and the EPCU payload preparation complex inside the CSG compound, becoming the Europe Space Port. Using these launch pads requires, especially during launch operations, programs. In return, ESA shares in the costs of operating the CSG.

Arianespace directly covers the costs of use, maintenance and upgrading of the Ariane launch sites and the payload preparation complex.
